

FANUEL CHITIYO

10099, Chikanga Medium, Mutare, Zimbabwe | (+263)773408488 | fanisimba@yahoo.ca | [linkedin.profile](#)

Information Management and GIS professional with 8+ years of experience supporting humanitarian and mine action programmes in Africa, specialising in information management, geospatial data management, GIS analysis, operational reporting and data-driven decision-making. Currently serving as an Information Management Officer with Norwegian People's Aid – DMAD Zimbabwe, providing technical support for mine action operations, operational planning, data management, analysis, reporting and GIS. Experienced in the design, development and management of mine action information management systems, geospatial databases, GIS workflows and digital data-collection solutions. Strong hands-on expertise in ArcGIS Pro, ArcGIS Online, ArcGIS Dashboards, Experience Builder, Survey123, Field Maps, IMSMA Core, Power BI, SQL, Excel, Python and R.

EDUCATION

Bachelor of Science in Information Systems | Manicaland State University of Applied Sciences, Zimbabwe

Degree obtained June 2023

Higher National Diploma in Information Technology | Mutare Polytechnic, Zimbabwe

Diploma obtained December 2005

National Diploma in Information Technology | Mutare Polytechnic, Zimbabwe

Diploma obtained December 2004

National Certificate in Information Technology | Mutare Polytechnic, Zimbabwe

Certificate obtained December 2002

EXPERIENCE

1. Information Management Officer | Norwegian Peoples AID – DMAD | Zimbabwe

September 2023 – Present

- Lead and provide technical support for the day-to-day information management and GIS functions supporting mine action operations, ensuring operational data is systematically collected, validated, managed, analysed and disseminated for planning, coordination and reporting.
- Design, develop and maintain GIS datasets, geospatial databases, web maps, dashboards and information products using ArcGIS Pro, ArcGIS Online, ArcGIS Dashboards, Experience Builder, Survey123 and Field Maps.
- Manage and maintain operational datasets covering non-technical survey, technical survey, manual clearance, mine detection dog operations, land release and explosive ordnance risk education.
- Conduct data quality assurance, validation, cleaning and analysis to improve the completeness, accuracy, consistency and reliability of operational information.
- Produce operational and thematic maps, statistical summaries, dashboards, charts, factsheets and other GIS and information products to support programme management, operational planning, coordination and donor reporting.

- Develop and maintain ArcGIS Survey123 forms and digital data-collection workflows, including XLSForm design, data validation, repeat structures, conditional logic and integration with ArcGIS Online.
- Develop and maintain ArcGIS Online dashboards and web mapping applications to monitor operational performance, planned versus actual targets, beneficiaries, land release and programme progress.
- Provide GIS and information management support for operational planning, prioritisation and coordination, translating operational requirements into practical maps, datasets, dashboards and analytical products.
- Manage and support the use of IMSMA Core for the capture, management, validation and reporting of mine action operational data, ensuring alignment with national and organisational information management requirements.
- Provide technical support for IMSMA Core administration, system configuration, data management and user support, including migration-related activities and troubleshooting.
- Develop automated and analytical workflows using SQL, Python, R and Excel to clean, process, analyse and report operational data.
- Prepare datasets, maps, presentations, statistical summaries and other information products for programme reviews, coordination meetings, donor reporting and management decision-making.
- Provide training, mentoring and user support to programme and field personnel on GIS, information management systems, Survey123, ArcGIS Online, Field Maps, IMSMA and data management procedures.
- Develop and maintain SOPs, technical documentation, user guides, training materials and system documentation to strengthen institutional capacity and standardise information management practices.
- Support the development and implementation of information management strategies, quality management procedures and data workflows in line with organisational and mine action information management standards.
- Collaborate with programme, operations and technical teams to translate operational information requirements into appropriate data collection, GIS, analysis and reporting solutions.

Key Achievements:

- Developed enterprise GIS workflows that improved operational reporting efficiency.
- Automated spatial reporting processes through ArcGIS Online and Dashboard solutions.
- Supported donor reporting through advanced data visualization and geospatial analysis.
- Managed enterprise geodatabases containing operational, survey, and environmental datasets while maintaining strict data quality standards.
- Produced high-quality thematic maps and spatial analyses supporting field deployment, donor reporting, and strategic planning.
- Authored GIS standard operating procedures and trained technical staff in GIS workflows and mobile data collection.
- Integrated GIS products into programme monitoring and evidence-based decision-making.

2. IMSMA Officer | SafeLane Global | Juba, South Sudan

February 2022 – September 2022

- Supported the management and operational use of IMSMA for mine action information management, ensuring operational data was accurately captured, validated, maintained and reported.
- Supported the collection, processing and quality assurance of mine action operational data from field teams and programme activities.
- Maintained and updated mine action datasets and produced maps, tables, statistical summaries and information products to support operational planning and programme reporting.

- Assisted in GIS mapping, data visualization, and reporting outputs.
- Maintained datasets and contributed to improving data management processes.
- Assisted in producing maps for planning and reporting
- Maintained accurate database information and performed quality assurance checks on recorded GIS and IMSMA Core data in accordance with SOPs, NMAS and IMAS.
- Collected all the topographical-related information on the Mine Action Team task sites including Suspect, Confirmed Hazardous Areas, Non-Technical Survey Information and Community Mine Risk Information.
- Assisted in the planning, mapping, information collection, and report submission for the SafeLane Mine Action Team project in South Sudan.
- Generated maps and reports that satisfy both internal and UN Mine Action Service in South Sudan (UNMAS-SS)
- Supported the design, testing and deployment of mobile data collection tools.
- Provided on-going IT support to the project HQ and field teams as required.

3. Information Management Officer | Norwegian People's Aid DMAD | Zimbabwe

September 2021 – January 2022

- Developed and managed the project's ArcGIS geodatabase accessed by more than 50 users across NPA
- global giving an update on area covered through web mapping platforms such as ArcGIS Online .
- Analyzed the productivity output from the mine action activities making large or complex data more accessible, understandable, and usable by project management.
- Simultaneously led 3 cross-matrix teams of 5-10 members each in projects to collect, manage, analyze, and disseminate information for reports generation and data driven decision making.
- Remodeled the information management system to prioritize the use of power automate (Microsoft Flow) by creating a webhook for data collected using Survey123 for ArcGIS and link to data analysis and visualization tools such as Excel and MS PowerBI.
- Administered organizational databases and information systems, ensuring data security, backups, and structured workflows.
- Supported data migration, integration, and maintenance of datasets across multiple departments.

4. Information Management / M&E Officer | Save the Children International | Zimbabwe.

October 2020 – June 2021

- Coordinated efficient data collection, data entry and data verification by staff and partners.
- Conducted research on identified problematic areas to determine the best course of action to correct the data.
- Coordinated baseline, endline, PDM, post-distribution monitoring, and multi-sector assessments.
- Developed indicator dictionaries, metadata standards, and data governance procedures.
- Managed 4Ws and 5Ws information systems.
- Established Accountability mechanisms to source feedback from the affected populations.
- Supported child protection information management and reporting.
- Produced analytical reports, maps, and visualizations for programme monitoring.
- Supported partner coordination and information-sharing activities.
- Conducted team meetings and shared reports for continuous programme learning and improvement.

- Lead the process of reviewing data collection and data entry tools with stakeholders. Facilitated training of Data entry Clerks and Field Monitors on data entry and filling systems.
- Effectively supported partner coordination and information-sharing activities.

5. National GIS/Information Mgmt. Officer | International Organization for Migration | Zimbabwe

July 2019 – September 2020

- Coordinated and supervised large-scale field assessments with multi-layered data collection techniques, including mobile data collection systems to gather timely information about affected populations, returnees and IDPs and any other source of data required.
- Supported humanitarian information management systems and reporting mechanisms.
- Contributed to Humanitarian Needs Overview (HNO) and Humanitarian Response Plan (HRP) processes.
- Managed operational datasets and supported inter-agency information sharing.
- Conducted data analysis and visualization to support humanitarian response planning.
- Supported implementation of the Displacement Tracking Matrix (DTM), contributing to mobility tracking, migration data management and humanitarian assessments.
- Supported emergency information management during Cyclone Idai and the COVID-19 response by producing timely operational reports and data products.
- Designed and deployed digital data collection tools using Kobo Toolbox, improving the efficiency and quality of field data collection.
- Produced maps, factsheets and information products using GIS to support displacement analysis and emergency operations.
- Developed interactive Power BI dashboards and analytical reports used by programme managers and humanitarian partners for operational planning and decision-making.
- Identified, recommended, developed, and supported relevant methodological, operational, and technological solutions relating to the Displacement Tracking Matrix (DTM) implementation.
- Developed data collection tools using Kobo Collect and ODK.
- Served as the National GIS technical lead and point of contact for the mission's GIS related matters.
- Participated in both cluster and intersectoral Information Management working groups.

6. Information Management Officer | Norwegian People's Aid DMAD | Zimbabwe (March 2014 – July 2019)

TECHNICAL SKILLS

Database & Data Management: Geodatabases, SQL, PostgreSQL, and Data Quality Assurance.

Mobile Data Collection: Kobo Toolbox, ODK, Survey123, XLS Forms, Field Maps, DHIS2.

GIS & Mapping: ArcGIS Pro, ArcGIS Online, QGIS, ArcGIS Enterprise, GPS data processing, spatial analysis, map production, Satellite Imagery Interpretation, Spatial Analysis and change detection

Data Science & Analysis: Python, R, STATA/SPSS, Excel (advanced), statistical modelling, automated quality checks.

Data Visualization: Power BI, ArcGIS Dashboards, Advanced Excel.

Web & Digital Tools: SharePoint, GitHub, basic web development familiarity (HTML/JS optional).

Other IM/ICT Skills: Cybersecurity awareness, IT troubleshooting, network support, asset configuration, documentation, metadata

SOFT SKILLS

Excellent Communication and Interpersonal skills

- Strong Facilitation and Training Skills
- Strong Teamwork and Collaboration skills
- Detail Oriented.
- Accountability to Affected Populations
- Broad understanding of GPS and Geo location data
- Highly computer-literate, leveraging data visualization skills
- Project planning, monitoring and reporting

APPLICATIONS: ArcGIS Pro, ArcGIS Online, ArcGIS Enterprise Survey123, Kobo Toolbox, ODK, Collector, Microsoft PowerBI, Tableau, ArcGIS Dashboards, Google Earth Pro, Microsoft 365, SharePoint, OneDrive Adobe InDesign, Adobe Illustrator, Microsoft Intune, Google Earth Engine and QGIS
